

Installation and User Guide

1 Getting Started

1.1 Full Installation

System Requirements

The FootballIQ can only been run on any operating systems.

Dependencies

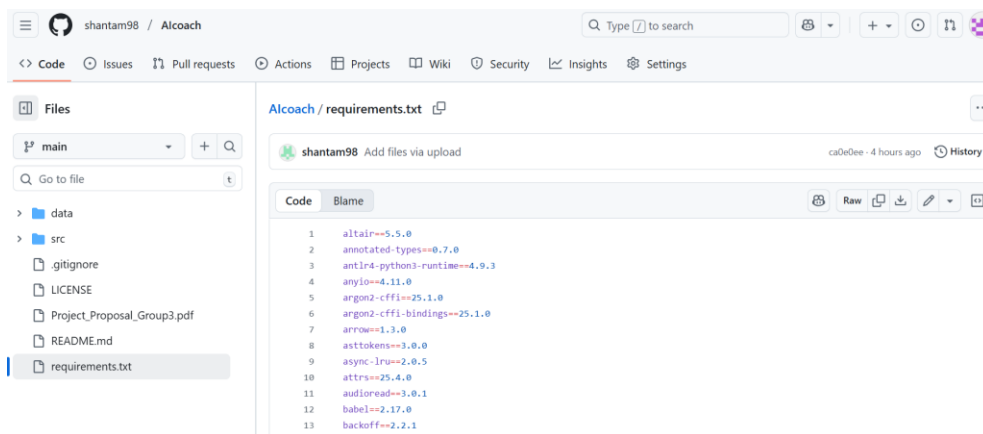

- Anaconda
- A modern web browser
- Python3.9 and above

Pre-requisites

- Clone or download project source code from GitHub repository.

Starting the System

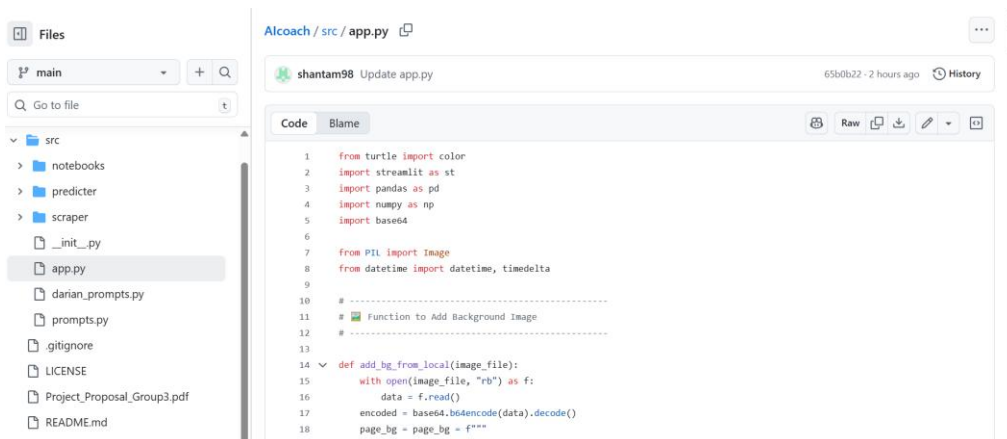

- Make sure the requirements.txt file is downloaded.

- Run the command below :

Command : `python3 -m pip install -r requirements.txt` (All the required libraries for the project will downloaded)

- Navigate and find the file : app.py in src folder

IRS-Intelligent-Reasoning-Systems-Practice-Project-Group3

d. Run the following commands :

Command 1 : `cd src` (This will navigate to the src path which is important)

Command 2 : `streamlit run app.py` (Run the streamlit app)

Once the application is opened the user can navigate across the app.

2 User Guide

To see the teams predictions and strategies :

a. Click on the team which you want to predict from the drop down of “Select your team”:

b. It will provide the latest 3 predictions for the user.

c. To look at team strategies and opponent strategies, click on the match dropdown which will provide each of the required information.
